<sup>2</sup>Victoires Éditions, Paris, France

---

December 12<sup>th</sup>, 2013  
JURIX'13, Bologna - Italy

# Context

- Application context: LEGILOCAL project
  - Easy access to local legal data
  - Information access: Queries / Exploring

# Context

- Application context: LEGILOCAL project
  - Easy access to local legal data
  - Information access: Queries / Exploring
- Legal data
  - Highly interconnected → Network of documents
  - Nodes: documents
  - Edges: various types of links
- ⇒ Single document **vs.** All its neighborhood in the graph

# Outline

- 1 Legal IR issues
- 2 Related work
- 3 Characteristics of legal collections
- 4 Proposed document ontology
  - Document module
  - Semantic module
  - Time frame
- 5 Querying
- 6 Conclusion and Future steps

# Legal IR complexity - Query example 1

« Donne moi la jurisprudence qui applique l'article 1382 sur la responsabilité pour faute du Code Civil\* »

«\*Give me the case law applying Article 1382 on liability for negligence of the Civil Code »

# Legal IR complexity - Query example 1

« Donne moi la jurisprudence qui applique l'article 1382 sur la responsabilité pour faute du Code Civil\* »

«\*Give me the case law applying Article 1382 on liability for negligence of the Civil Code »

« Donne moi la jurisprudence qui applique l'article 1382 sur la responsabilité pour faute du Code Civil\* »

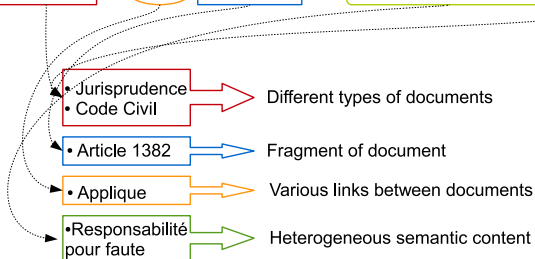

# Legal IR complexity - Query example 1

« Donne moi la jurisprudence qui applique l'article 1382 sur la responsabilité pour faute du Code Civil\* »

«\*Give me the case law applying Article 1382 on liability for negligence of the Civil Code »

« Donne moi la jurisprudence qui applique l'article 1382 sur la responsabilité pour faute du Code Civil\* »

# Legal IR complexity - Query example 2

« Donne moi la version en vigueur de l'article 1382 du Code Civil et la version précédente\* »

« \*Give me the version in force of Article 1382 of the Civil Code and the previous version »

## Legal IR complexity - Query example 2

« Donne moi la version en vigueur de l'article 1382 du Code Civil et la version précédente\* »

« \*Give me the version in force of Article 1382 of the Civil Code and the previous version »

« Donne moi la version en vigueur de l'article 1382 du Code Civil et la version précédente\* »

# Legal IR complexity - Query example 2

« Donne moi la version en vigueur de l'article 1382 du Code Civil et la version précédente\* »

« \*Give me the version in force of Article 1382 of the Civil Code and the previous version »

« Donne moi la version en vigueur de l'article 1382 du Code Civil et la version précédente\* »

# Legal standards and ontologies

- XML Legal standards

- Standard representation of the structure of legal texts
- Interoperability and exchange of sources between parliamentary bodies → Analysis, comparison
- Reference and modification management, automatic updating
- Akomantoso, Metalex

- Legal ontologies

- Describe domain concepts
- CLO - DOLCE, LKIF core (Top ontologies)

# Existing legal IR systems

## ● Legifrance

### Article L131-1

Abrogé par [Loi n°96-142 du 21 février 1996 - art. 12 \(V\)](#) [JORF 24 février 1996](#)

Le maire est chargé, sous le contrôle administratif du représentant de l'Etat dans le département, de la police municipale, de la police rurale et de l'exécution des actes de l'autorité supérieure qui y sont relatifs.

# Existing legal IR systems

- Legifrance
- Normattiva
- UK Legislation

## Results

- Legal links are treated as document legal status.
- Point-in-time access.

# Motivation

- Existing legal IR systems
  - One type of link between documents (modify)
  - One still needs to navigate through multiple links to get full information
- Real legal needs
  - Consider multiple types of links
  - Represent multiple types of documents with different structures
  - Consider temporal aspects
  - Consider semantic content

# Our goals

## Documents

- The semantic content
- The Structure/fragments of text

# Our goals

## Documents

- The semantic content
- The Structure/fragments of text

## Links

- Time: versioning
- Intertextual relationship

# Approach

# Approach

Represent homogenously all information about the collection

# Approach

## ● Benefits

- New search facilities for legal texts (document's neighborhood)
- Help readers (citizens) in comprehending law quickly
- Help lawyers in their tasks
- Support law makers in developing, validating and maintaining legal texts
- etc.

# Needs for legal IR / Ontology modules

## 1 Document structure

- Sections, paragraphs, articles, etc.

## 2 Document type

- Code, case law, decision, etc.

## 3 Relations between documents

- Modification, abrogation, codification, etc.

## 4 Semantic description of the content

- Domain concepts or entities

## 5 Time frame

- Creation date, modification date, version.

## 1 Document module

- Document structure
- Document type
- Collection: relations between documents

## 2 Semantic module

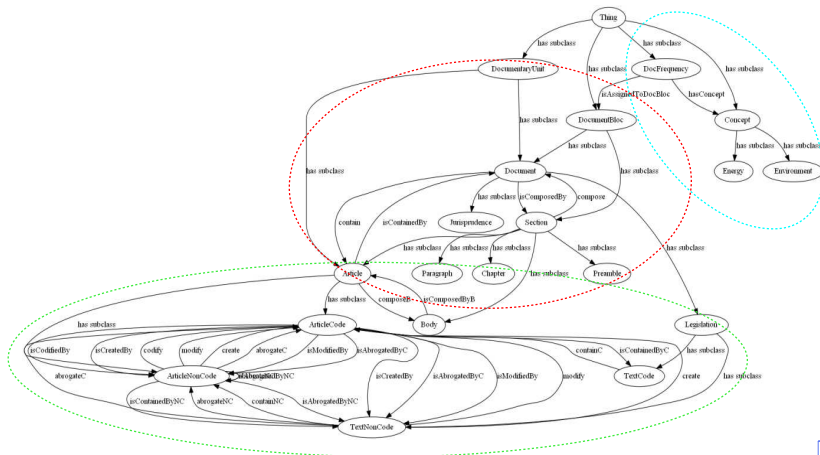

- Semantic description of the content

## 3 Time frame

- Dates related to a document

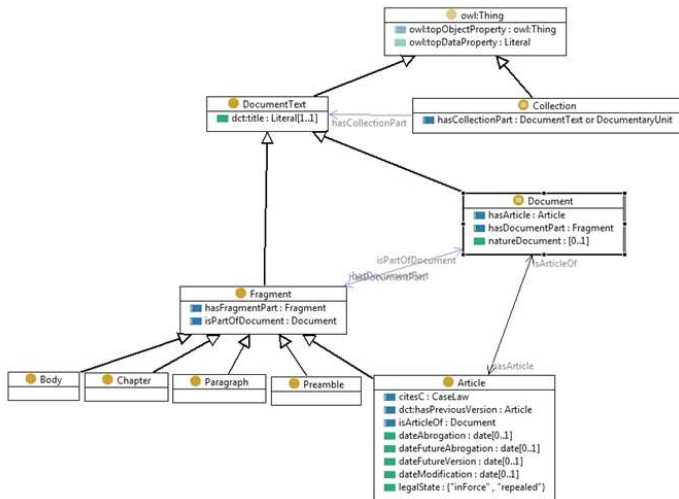

# One ontology for all: Overview

# Document Module: Structure

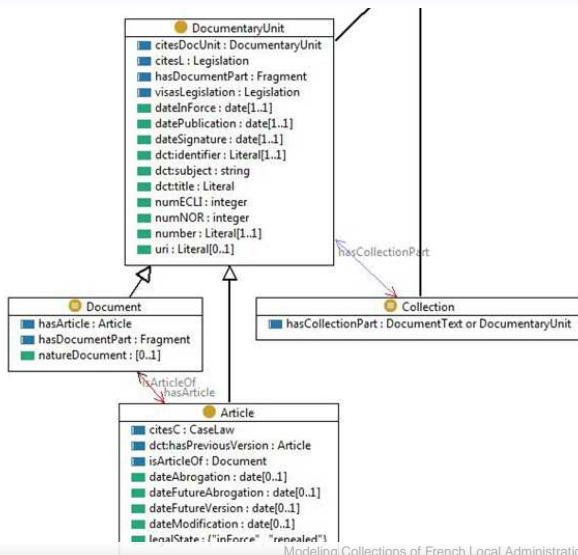

- Document fragment: Paragraph, Chapter, Preamble, Body, Article

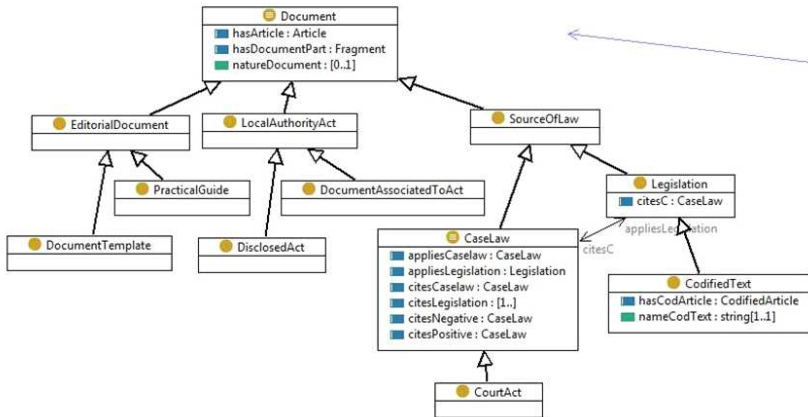

# Document Module: Structure

## Document unit: Article, Document (citable objects)

# Document Module: Collection

- Many types of documents: Document (Legislation, Case law, etc.)

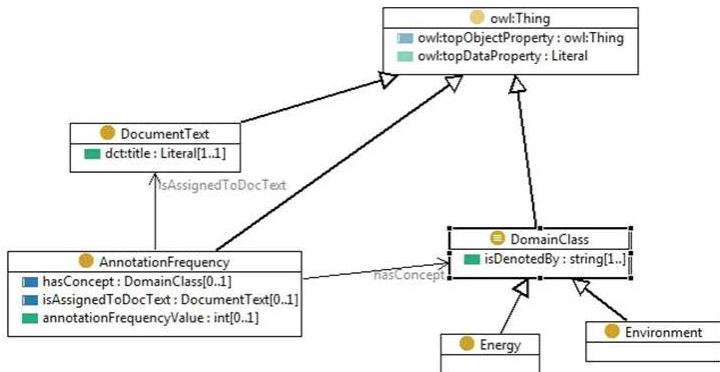

# Document Module: Collection

- Many types of links between documents

# Semantic Module

## Domain classes

# Time frame

## • Versions of an article

## • Dates

# Modeling legal collection

## Instantiate the ontology to produce a set of RDF triples

- Model documents and their types (Legislation, Jurisprudence, etc.)
- Articles (ArticleCode, etc.)
- Domain concepts (Energy, Environment, etc.)
- Relations between classes (hasConcept, isModifiedBy, etc.)

⇒ A knowledge base query-able with SPARQL (Relational queries)

# Querying on different aspects

- Semantic query: semantic content of a law text
  - *Which articles are about "liability for negligence"?*
    - Classes "DomainClass" and "DocumentFragment"
- Relational query: different versions of a law text (document or article)
  - *Which are the different versions of the "Article 1382" of "Civil Code"?*
  - *Give me the version in force of "Article 1328" along with its "modification date"?*
    - Classes "Article" and "UncodifiedText"
    - Property "hasPreviousVersion"
    - Property "dateModification"
- Relational queries: documents types / links types
  - *Which case law applies the Article 1382 of the "Civil Code"?*
  - *By which text the "Article 1382" of the "Civil Code" was created?*
    - Classes "Case law", "Article" and "CodifiedText"
    - Link "applies"
    - Link "isCreatedBy"

# Conclusion and future steps

- Modeling a collection of documents
  - Meet the needs of the LEGILOCAL project (validation)
    - Semantic content descriptors
    - Intertextual relationships
    - Documents fragments
    - Versions
- Perspectives
  - Querying: a user friendly interface to send queries
  - Results: display answers as graphs of interconnected documents
  - Evaluation: user satisfaction

# Thank you
